

Task 1: Design

1. ~~initial~~ initial:

pl-scores: [lbs, n, nc]

pl-boxes: [lbs, na, 4] ing-comes

an-center: [lbs, na, 2] ing-comes

gt-labels: [lbs, n-max-b, 1]

gt-boxes: [lbs, n-max-b, 4]

med-gt: [lbs, n-max-b, 1]

当 targets 不在 84 (lbs, 0.5) 时

→ 返回 [lbs, na, 1] 标志

② [lbs, na, 4] 标志 boxes

lbs, na, nc] 标志 scores

[lbs, na] 空 0.

[lbs, na] 空 0 target-gets.

当 targets 不在 84 时

① get for med: ~~the box is not in the box~~

② 针对每个目标特征，筛选在目标框 boundaries.

med-gets: [lbs, n-max-b, na, 1]

med = med-gets * med-gets. [lbs, n-max-b, na]

② 针对每个目标的 anchors，计算 box metric

over-laps (overlap), cls-scores

~~the box is not in the box~~ ing-id
 index1 = [0, 0, 0, 0] index2 = [5, 4, 1, 1]
 [0, 0, 0, 0] [6, 2, 7, 7] cls-id.

③ 筛选 top-k 候选.

align-metrics: [lbs, n-max-boxes, na]

topk-ids = [lbs, n-max-boxes, topk]

topk-med-gets = [lbs, n-max-boxes, na]

count-boxes [0, 1, 2, 3, 4, 5, 6, 7] + = score [0, 1, 2, 3, 4, 5, 6, 7]

候选: topk-ids: [0, 1, 2, 3, 4, 5, 6, 7]

[5, 4, 1, 2, 7]

[0, 1, 2, 3, 4, 5, 6, 7]

[0, 0, 0, 0, 1, 1, 1, 1]

topk-metrics: 筛选

→ [lbs, n-max-boxes, topk]

medal-ids → topk-ids 为 0 或位置 0.

topk-ids 为 1, 其位置为 0.

④ 选择 IOU 最高的候选. (7-metric 不能对应 1)

med-gets [0, 1, 2, 3, 4, 5, 6, 7] 但 1-gets box-gets

[true, ..., false, ..., 1]

[0, 1, 0, 1, 0, 1, 1, 1]

[0, 1, 0, 1, 0, 1, 1, 1]

idx ^{max} anchors:

$\begin{bmatrix} 1 & 1 & 1 & 0 & 1 & 0 & 1 & 1 \\ 1 & 0 & 1 & 0 & 0 & 0 & 0 & 1 \\ 1 & 0 & 0 & 0 & 1 & 0 & 0 & 1 \end{bmatrix}$

→

target-idx = lbs.na

每个 anchor 对应哪个点

fy_mask lbs.na

每个 anchor 表示前两个特征

mask_pos lbs.max_boxes.na → 最大框号

② <5 get-targets 对 positive anchor points 进行其对应的

target labels, target bounding boxes 和 target score.

~~target~~ batch-idx = $\begin{bmatrix} 1 & 1 \\ 2 & 2 \\ \vdots & \vdots \\ 1 & 1 \end{bmatrix}$

target-idx = target-idx + $\begin{bmatrix} 1 & 1 \\ 2 & 2 \\ \vdots & \vdots \\ 1 & 1 \end{bmatrix} * \text{self.n-max-boxes}$

target-labels = gt-labels.flatten

lbs.n-max-boxes lbs[target-idx]

lbs * n-max-boxes

targets:

$\begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix}$

$\begin{bmatrix} 1 \\ 1 \end{bmatrix}$

$\begin{bmatrix} 1 \\ 1 \end{bmatrix}$

$\begin{bmatrix} 1 \\ 1 \end{bmatrix}$

$(cls, n_max_boxes, \sum \sigma_b \begin{bmatrix} 1 \\ 1 \end{bmatrix} (cls, 0.5), \text{ing. coefficient})$

$nc = H \cdot xw_1 + H \cdot xw_2 + H \cdot xw_3$

pred_scores: $[bs, na, nc]$

pred_distribution: $[bs, na, 4 \times 16]$

diff $\frac{1}{2}$
drop \rightarrow

anda_parts: $[na, 21]$

style_boxer: $[na, 1]$

gt_labels: $[bs, n_max_b, 1]$

gt_boxes: $[bs, n_max_b, 4]$

mask_gt: $[bs, n_max_b, 1] \rightarrow$ 标注为0由 target
